COLOMBIAN FINTECH CUSTOMER ANALYTICS

SMU SINGAPORE MANAGEMENT UNIVERSITY

CONTEXT & PROBLEM

INTRODUCTION

Digital financial services in **Colombia** presents new opportunities for fintech investment, but also introduces uncertainty regarding profitability.

Investors require reliable indicators of customer engagement, loyalty, and value to assess whether a fintech platform can **sustain growth over time.**

OBJECTIVE

Provide meaningful and dynamic insights that support evaluation of fintech **business sustainability and investment potential.**

METHODOLOGY

This project combines **3 perspectives** relevant for investment evaluation:

1. Colombian Market Context
2. Fintech Usage Behaviour
3. Customer Value Analytics & Modeling

FINTECH ANALYTICS

REGIONAL BEHAVIOUR PATTERNS

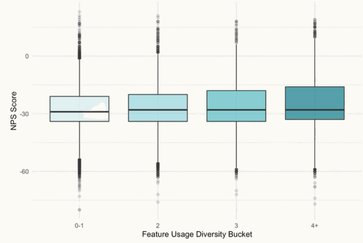
Customer behaviour across Colombian cities reveal regional **engagement differences** that inform market scalability and operational focus.

PRODUCT ADOPTION

Product adoption show strong engagement across core services, indicating a **stable and diversified customer base.**

ENGAGEMENT & EXPERIENCE

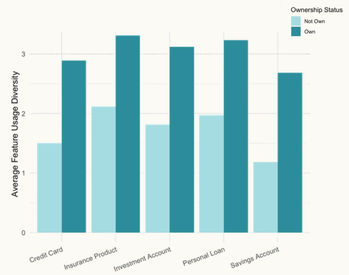
CUSTOMER ADVOCACY VS FEATURE USAGE



Customers using more platform features show stronger advocacy levels: **broader engagement supports loyalty**.

FEATURE USAGE BY PRODUCT

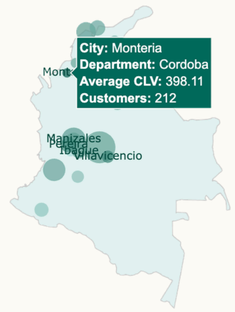
Product ownership is linked to **deeper platform engagement** across all services.



RETENTION & CUSTOMER VALUE (CLV) MODELING

CHURN RISK

We identified customer groups with higher **likelihood of disengagement,** to assess the stability of future revenue streams.

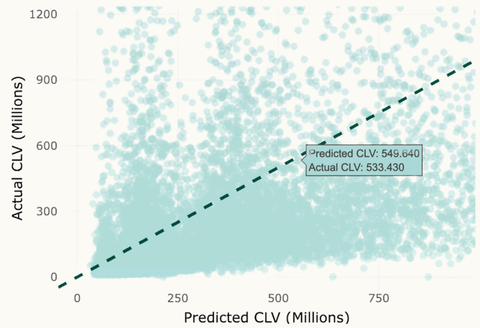


CUSTOMER VALUE BY LOCATION

Geographic differences in CLV highlight markets where customer profitability is strongest, supporting **regional investment decisions.**

PREDICTIVE CLV MODEL

Our predictive model estimates long-term customer value, enabling **revenue forecasting** of potential customer groups.



CONCLUSION

Customer analytics and predictive modelling can support **investment evaluation** in emerging fintech markets.

1. Higher Transaction Values = Greater CLV
2. Certain regions show unexpectedly high profitability
3. Engagement behaviour influences customer retention
4. Predictive modelling improves forecasting of future revenue
